

# Someone's *life* depends on *YOU*.

## Can I give blood?

---

### General health requirements

To donate blood, you must:

- Be at least age 16. Written parental consent is required for 16 year olds to donate blood.
- Be in general good health.
- Be off any antibiotic medication for 24 hours.
- Wait fourteen days after donating platelets before giving whole blood.
- Wait one year after receiving a blood transfusion.
- Wait until you are feeling well if you have had a cold, flu, sore throat or fever.
- Wait one year if you have visited or lived in a malaria zone.
- Wait three years if you emigrated from a country with malaria-endemic areas.
- Wait six weeks after having a baby, or one year if the delivery required a blood transfusion.
- Wait one year after you have completed treatment for syphilis or gonorrhea. You may donate if you are being treated for chlamydia, genital herpes, trichomoniasis, or venereal warts.
- If you have gotten a tattoo, you may donate if disposable ink and disposable needles were used. If not, wait one year.
- If you had an ear or skin piercing with a disposable needle or piercing gun, you may donate. If not, wait one year.
